

# AHI Real-Time Marketing Data Application

## Acceptance Criteria: Plain-English Reference & Grading Guide

### What are Acceptance Criteria?

Think of Acceptance Criteria as an objective checklist of conditions the app must satisfy. If every condition passes testing, the Product Owner (Cal Hamer) and project stakeholders can officially sign off on the feature as complete and working properly.

### User Story 1: Customer App (Browsing & Ordering)

**Strategic Goal:** Make it easy and safe for people to browse and buy AHI skincare devices on their mobile devices.

| Quantified Acceptance Criterion                      | Plain-English Meaning & Purpose                                                                                                                      |
|------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| 100% of active skincare devices displayed in catalog | No missing products. Every wand, massager, and wrinkle remover currently for sale must show up in the app catalog.                                   |
| Device pricing & stock status loaded in < 1 second   | The app must feel snappy. When a customer taps on a device, the price and real-time inventory status appear almost instantly without lag.            |
| 100% PCI-compliant 256-bit encrypted checkout        | Bank-grade payment security. Credit card numbers and customer details are scrambled and protected so sensitive financial data cannot be intercepted. |
| Instant order & PDF invoice emailed in < 5 seconds   | Right after paying, the customer receives an order confirmation screen and a professional PDF receipt in their inbox within 5 seconds.               |
| Account order history tracking available 24/7        | Customers can securely log in anytime to view past order receipts and track active shipping/delivery status.                                         |

### User Story 2: Market Trends (Industry Tracking)

**Strategic Goal:** Help the marketing team spot what is trending in skincare so they know which products to develop, adjust, or retire.

| Quantified Acceptance Criterion                    | Plain-English Meaning & Purpose                                                                                 |
|----------------------------------------------------|-----------------------------------------------------------------------------------------------------------------|
| External trend data feeds refresh every 15 minutes | Market numbers stay current throughout the workday rather than updating only once a week in batch spreadsheets. |

|                                                                  |                                                                                                                                                                |
|------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Filters across 3 device categories load in &lt; 2 seconds</b> | When marketers filter by wands, massagers, or infusers, the trend visualizer renders new charts in under 2 seconds.                                            |
| <b>Feasibility estimated with &gt;= 12 months trend history</b>  | When predicting whether a new product concept will succeed, the app evaluates at least one full year of historical trend data to prevent misleading forecasts. |
| <b>Real-time comparison against 4.5%–7.5% growth targets</b>     | The app automatically compares AHI's sales velocity directly against the industry's projected annual growth rate range (4.5% to 7.5%).                         |
| <b>Trend intelligence exports to CSV/PDF in &lt; 5 seconds</b>   | Marketers can click a single button to download clean, presentation-ready reports for team meetings in under 5 seconds.                                        |

### User Story 3: Competitive Analysis (Watching Competitors)

**Strategic Goal:** Keep tabs on rival device pricing and identify which competing brands hold the largest market share.

| Quantified Acceptance Criterion                                        | Plain-English Meaning & Purpose                                                                                                       |
|------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------|
| <b>Identify &amp; rank top 10 competitor products by market share</b>  | Provides a live leaderboard ranking the top 10 best-selling competing skincare devices in the global market.                          |
| <b>Global sales comparison refreshed daily across regions</b>          | Sales figures from North America, Europe, and Asia update daily so the team sees fresh competitor movements.                          |
| <b>Benchmark pricing &amp; specs across &gt;= 5 product attributes</b> | Provides side-by-side comparison tables evaluating at least 5 key details (price, battery life, warranty, features, and user rating). |
| <b>AHI market share calculated automatically per category</b>          | The app automatically computes what percentage of the total market AHI owns in each device category.                                  |
| <b>Automated alerts when competitor share shifts by &gt;= 2%</b>       | If a competitor suddenly gains or loses 2% market share, the app sends an instant alert to the marketing director.                    |

### User Story 4: Opinion & Sentiment Analysis (Customer Reviews)

**Strategic Goal:** Use automated analysis to read customer reviews and understand how buyers feel about AHI products.

| Quantified Acceptance Criterion                                     | Plain-English Meaning & Purpose                                                                                             |
|---------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------|
| <b>Sentiment engine categorizes reviews with &gt;= 90% accuracy</b> | The automated review classifier must accurately label reviews as Positive, Neutral, or Negative at least 9 out of 10 times. |

|                                                                   |                                                                                                                            |
|-------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------|
| <b>Preference analysis updated within 5 minutes of new review</b> | As soon as a customer submits feedback, sentiment scores and theme charts update within 5 minutes.                         |
| <b>Profiles buyer demographics across &gt;= 4 key segments</b>    | Groups customer sentiment by buyer profile (e.g., age cohorts, specific skincare concerns, or spending brackets).          |
| <b>Tags feedback across &gt;= 5 concept testing categories</b>    | Automatically sorts feedback into clear operational buckets like Ease of Use, Battery Life, Price, Packaging, and Results. |
| <b>Brand sentiment dashboard updates daily with 99.9% uptime</b>  | The marketing leadership sentiment tracking dashboard remains reliable and accessible around the clock.                    |

## User Story 5: Finance & IT Operations (Behind the Scenes)

**Strategic Goal:** Ensure the application processes payments accurately, remains secure, and operates without downtime.

| Quantified Acceptance Criterion                                         | Plain-English Meaning & Purpose                                                                                               |
|-------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------|
| <b>100% of transactions generate automated PDF invoices</b>             | Every single purchase creates an official, printable invoice for customer records and accounting audits without manual entry. |
| <b>Real-time transaction data logged with zero data loss</b>            | Eliminates dropped orders, double-charges, and missing financial transaction records.                                         |
| <b>Data feed integration maintains &gt;= 99.9% system availability</b>  | The core app and live data connections stay online continuously (under 9 hours of total unscheduled downtime per year).       |
| <b>Zero critical security vulnerabilities (\$20k security standard)</b> | The codebase passes all penetration testing and security audits with zero high-severity flaws before production launch.       |
| <b>Performance latency maintained at &lt; 2.0s under peak load</b>      | Even during peak marketing campaign traffic, response times remain under 2 seconds without freezing.                          |
